

ARO-935

ANTISCALANT/DISPERSANT

- Prevent membranes from scaling
- Reduce membranes cleaning frequency
- Avoid unnecessary down time and repairing cost
- Maintain RO performance
- Economic dosage
- Approved by NSF

PRODUCT DESCRIPTION:

ARO-935 ANTISCALANT / DISPERSANT is a highly effective antiscalant, specially formulated for feedwaters with the highest levels of metal oxides, silica and scale forming minerals.

ARO-935 ANTISCALANT / DISPERSANT is a super threshold agent able to stabilize a wide range of supersaturated salt solutions, preventing precipitation on the membrane surface.

ARO-935 ANTISCALANT / DISPERSANT protects and enhances the reverse osmosis (RO) and nanofiltration (NF) system, by controlling mineral scale formation due to carbonate, sulfate and fluoride compounds.

APPLICATION:

ARO-935 ANTISCALANT / DISPERSANT should be injected into the feed stream prior to the static mixer and cartridge filter. Dosing rates vary depending on feedwater quality and recovery but normally run between 4 to 9 ppm.

Example: If the recommend dosage is 6 ppm based on total flow to RO before micron filter. If flow 30m³/ H then dose 180 ml per hour of product.

APPROVAL

Approved by NSF.

PHYSICAL PROPERTIES

Appearance	: Light straw colour
Relative Density	: 1.02 – 1.12
Form	: Liquid
pH	: 3.0 – 4.0

Packaging : Supplied in 25 litres non-returnable containers.
