

AWT-21

HARDNESS CONTROL LIQUID

- Liquid Phosphate to prevent scaling in both high and low-pressure boilers
- Easy application in liquid form

PRODUCT DESCRIPTION:

AWT-21 HARDNESS CONTROL LIQUID is an alkaline liquid phosphate formulated to prevent scale in both high and low-pressure boilers.

AWT-21 HARDNESS CONTROL LIQUID in conjunction with Apex AWT-11 Alkalinity Compound will react with the hardness salts and precipitated it as a soft sludge, which is more readily removed by blowdown. As long as phosphate reserves remain in the boiler water, all calcium and magnesium salts will have been precipitated

APPLICATION:

AWT-21 HARDNESS CONTROL LIQUID can be fed via chemical dosing tank or direct to the bypass pot feeder.

Alternative for low-pressure boiler AWT-21 HARDNESS CONTROL LIQUID can be dose into the hotwell / cascade tank or condensate return tank.

AWT-21 HARDNESS CONTROL LIQUID must not be mixed with oxygen scavengers or condensate system corrosion inhibitors.

Dosage: Initial dosage of 250 ml/ton of water will raise Phosphate by 10 ppm.

Testing and Control: The daily boiler water phosphate test result determines the necessary dosage. For details of testing procedure and control, please refer to APEX Treatment Program chart provided onboard, or contact your APEX Chemicals representative.

SPECIFICATION

General

Invent Hazard Material (IMO/EU) Classification: C-9

PHYSICAL PROPERTIES

Appearance	: Clear light liquid
Relative Density	: 1.01-1.11
Form	: Liquid
pH	: 11.0 – 13.0

Packaging : Supplied in 25 litres non-returnable containers.
